Passive isolation "Passive vibration isolation" refers to vibration isolation or mitigation of vibrations by passive techniques such as rubber pads or mechanical springs, as opposed to "active vibration isolation" or "electronic force cancellation" employing electric power, sensors, actuators, and control systems.

ACTIVE NOISE CANCELLING: Internal precision noise reduction circuitry effectively eliminates up to 85% of background noise, ideal for use when traveling by airplane, making it a must-have for peaceful sleep and enjoyable audio experience in airplane or simply when encountering noisy environments in daily life.

These fold-flat active noise-cancelling headphones deliver 20 dB reduction in background noise. Inline control/mic for answering calls and controlling music. Equipped with 40 mm drivers with neodymium magnet systems, power/low battery indicator, adjustable headband, swiveling earcups, detachable cable with 1/8-inch (3.5 mm) mini-plugs. A ¼-inch (6.3 mm) adapter, airline adapter and durable ...

Introduction []. Many engineering systems create unwanted acoustic noise. Noise may be reduced using engineering noise control methods. One noise control method popular in mufflers is the Helmholtz resonator, see here. It is comprised of a cavity connected to the system of interest through one or several short narrow tubes.
