Are large building envelopes airtight? Why should they be airtight? Who is working on this problem? How can buildings be tested? Call Infiltec at (540) 943-2776 for assistance.

INFILTEC: Large Building Envelope Airtightness Testing

In building and construction, the R-value is a measure of how well a two-dimensional barrier, such as a layer of insulation, a window or a complete wall or ceiling, resists conductive flow of heat. R-values measure the thermal resistance per unit of a barrier's exposed area. The greater the R-value, the greater the resistance, and so the better the thermal insulating properties of the barrier.

R-value (insulation) - Wikipedia

The British thermal unit (Btu or BTU) is a traditional unit of heat; it is defined as the amount of heat required to raise the temperature of one pound of water by one degree Fahrenheit. It is part of the United States customary units. Its counterpart in the metric system is the calorie, which is defined as the amount of heat required to raise the temperature of one gram of water by one degree ...
