Chemistry - 101science.com

Chemistry is the scientific discipline involved with elements and compounds composed of atoms, molecules and ions: their composition, structure, properties, behavior and the changes they undergo during a reaction with other substances. In the scope of its subject, chemistry occupies an intermediate position between physics and biology. It is sometimes called the central science because it ...

Atoms First - An Introduction to Chemistry

The history of chemistry represents a time span from ancient history to the present. By 1000 BC, civilizations used technologies that would eventually form the basis of the various branches of chemistry. Examples include extracting metals from ores, making pottery and glazes, fermenting beer and wine, extracting chemicals from plants for medicine and perfume, rendering fat into soap, making ...

Describe the differences between an atom and a molecule. Construct simple molecules from atoms. Recognize that the subscript in the molecular formula indicates the number of that atom in the molecule. Recognize that the coefficient indicates the total number of molecules. Associate common molecule ...
