Highlights We examine the effects of alcohol intoxication on creative problem solving. Sober and intoxicated (BAC = .075) individuals solved Remote Associates Test items. Intoxicated individuals solved more items in a shorter time compared to sober. Intoxicated individuals were more likely to rate their solutions as insightful.

Numerical analysis is the study of algorithms that use numerical approximation (as opposed to general symbolic manipulations) for the problems of mathematical analysis (as distinguished from discrete mathematics). Numerical analysis naturally finds application in all fields of engineering and the physical sciences, but in the 21st century also the life sciences, social sciences, medicine ...
