Results and analysis Country Coverage, 2016. We aim to include a maximum number of countries in the Report every year, within the constraints posed by data availability. To be included in the Report, a country must have data available for a minimum of 12 indicators out of the 14 that make up the Index. In 2016, we have been able to include 144 countries in the Report.

Global warming is a long-term rise in the average temperature of the Earth's climate system, an aspect of climate change shown by temperature measurements and by multiple effects of the warming. The term commonly refers to the mainly human-caused observed warming since pre-industrial times and its projected continuation, though there were also much earlier periods of global warming.
