

### **melanogenesis and malignant melanoma pdf**

Melanoma, also known as malignant melanoma, is a type of cancer that develops from the pigment-containing cells known as melanocytes. Melanomas typically occur in the skin, but may rarely occur in the mouth, intestines, or eye. In women, they most commonly occur on the legs, while in men they are most common on the back. Sometimes they develop from a mole with changes such as an increase in ...

### **Melanoma - Wikipedia**

Through a process called melanogenesis, melanocytes produce melanin, which is a pigment found in the skin, eyes, hair, nasal cavity, and inner ear. This melanogenesis leads to a long-lasting pigmentation, which is in contrast to the pigmentation that originates from oxidation of already-existing melanin.

The inhibitory effects of dihydromyricetin purified from *Ampelopsis grossedentata* on melanogenesis and its antioxidant characteristics were investigated. Assays of tyrosinase activities and melanin content in B16F10 mouse melanoma cells were carried out spectrophotometrically, and the expression of melanogenesis-related proteins was determined by Western blotting.

There is sufficient evidence to show that overexposure to ultraviolet (UV) radiation is the main preventable cause of skin cancers – both melanoma skin cancer (the most serious type) and non-melanoma skin cancers (NMSC).[1,2] The sun is the principal source of natural UV radiation.

The ER is a complex, dynamic organelle whose functions include protein folding, Ca<sup>2+</sup> storage, and lipid and carbohydrate metabolism. Diverse cellular stresses, such as perturbations in Ca<sup>2+</sup> homeostasis, redox imbalance, altered protein glycosylation, or protein folding defects, cause unfolded or misfolded proteins to accumulate in the ER lumen, a condition known as ERS.

LC3 (microtubule-associated protein light chain 3), the most studied autophagy biomarker, was originally identified as a subunit of microtubule-associated proteins 1A and 1B (MAP1LC3) and was later found to contain similarity to yeast protein Apg8/Aut7/Cvt5.
