

memory allocation problems in pdf

In the design of embedded systems, memory allocation and data assignment are among the main challenges that electronic designers have to face. In fact, they impact heavily on the main cost metrics (power consumption, performance and area) in electronic devices.

Memory Allocation Problems in Embedded Systems

An allocation is a mapping $A : T \rightarrow P$ such that the image of a task τ_i is a processor p_k : $\tau_i \in A(\tau_i) = p_k$
(1) The allocation problem consists in finding the mapping A which respects the whole set of constraints described in the immediate below. There are three classes of constraints the allocation prob-
