Multimedia signal processing and Multimedia systems. Note that multimedia signal processing is presented in a larger extent than in the standard books on fundamentals of multimedia systems. Besides commonly used signal processing techniques, here we also consider the tools convenient for certain advanced applications

.1.1 Signals and Systems: Elec 301 summary: This course deals with signals, systems, and transforms, from their theoretical mathematical foundations to practical implementation in circuits and computer algorithms. At the conclusion of ELEC 301, you should have a deep understanding of the mathematics and practical issues of signals in continuous and

More seriously, signals are functions of time (continuous-time signals) or sequences in time (discrete-time signals) that presumably represent quantities of interest. Systems are operators that accept a given signal (the input signal) and produce a new signal (the output signal). Of course, this is an abstraction of the processing of a signal.

Communication Systems: In today's highly-networked world, a multimedia system should be capable of communicating with other multimedia systems. The multimedia data transmitted through a network may be discrete (e.g., a text document, or email) or continuous (e.g., streamed audio or video) data.
