

neural and fuzzy logic pdf

Fuzzy logic is a form of many-valued logic in which the truth values of variables may be any real number between 0 and 1. It is employed to handle the concept of partial truth, where the truth value may range between completely true and completely false. By contrast, in Boolean logic, the truth values of variables may only be the integer values 0 or 1. ...

Fuzzy logic - Wikipedia

An artificial neural network is a network of simple elements called artificial neurons, which receive input, change their internal state (activation) according to that input, and produce output depending on the input and activation.. An artificial neuron mimics the working of a biophysical neuron with inputs and outputs, but is not a biological neuron model.

IEEE Transactions on Neural Networks is devoted to the science and technology of neural networks, which disclose significant technical knowledge, exploratory developments, and applications of neural networks from biology to software to hardware. This Transactions ceased production in 2011. The current retitled publication is IEEE Transactions on Neural Networks and Learning Systems.

Adaptive Net Indicators - neural nets especially adapted to pattern recognition, some of which automatically include lags of inputs. Useful for building your own adaptive moving averages. Adaptive Turboprop 2- like the neural nets in the Prediction Wizard, but they operate like an indicator and automatically retrain themselves.

Intelligence To be intelligent you first have to know what being Intelligent is. And you also have to know what being ignorant is. Ignorant is just another word for "Not knowing". But not knowing is not always obvious or clearly understood. That's because learning is not fully understood. The more you learn the more you should realize what you didn't know.
