NEUROObjects is a set of C++ library classes for neural network development, exploiting the potentialities of object-oriented design and programming. The main goal of the library consists in supporting experimental research in neural networks and fast prototyping of inductive machine learning applications.

NEUROObjects: an object-oriented library for neural network

Computer simulation of neural networks is an important part of this investigation. This paper applies concepts from an important trend in software engineering research, namely object-oriented programming, to model neural networks.

Object-oriented modeling and simulation of neural networks

In this paper, we present the Java-based Object-Oriented Neural Network Simulator (ObOrNNS), a software package developed by the Intelligent Semiconductor Manufacturing group at the Georgia Institute of Technology. This program is capable of constructing, training, and exercising multilayer perceptron neural networks for various semiconductor

Object-Oriented Evolutionary Fuzzy Neural Inference System for Construction Management Article (PDF Available) in Journal of Construction Engineering and Management 129(4) Â August 2003 with 100 ...

(PDF) Object-Oriented Evolutionary Fuzzy Neural Inference

This paper discusses the issues in simulating neural networks using an object-oriented concurrent programming framework, based on our experience in developing two generations of the NSL (Neural Simulation Language) simulation system.

A concurrent object-oriented framework for the simulation

A Neural Network is an Artificial Intelligence (AI) methodology that attempts to mimic the behavior of the

neurons in our brains. Neural networks really shine when it comes to pattern recognition and are used in image and character recognition programs, data filtering applications, and even robotics.

C# Artificial Intelligence (AI) Programming: A Basic

detection using object oriented system was considered the best than other techniques. The prediction and identification of code clone in software product can improve the quality of the software. In this research work we use the object oriented system with neural network for the identification and prediction of clones.

Programming Neural Networks with Encog3 in Java

Recently Iâ€™ve been playing with a tool set called JOONE. The goal of the JOONE project is to produce a fast prototyping environment for Neural Nets and a series of libraries to training these networks.
