wells/ field through removal, inhibition and management. The Chemical Enhanced Oil Recovery projects like polymer, surfactant and ASP need very specific chemicals and diverse kind of challenges are encountered during their field implementation. Chemistry of crude oil and water plays an important role in most of these applications

Oil Chem Technologies is a technology provider of surfactants used for Chemical Enhanced Oil Recovery (EOR) including ASP and SP. ASP. In the Alkaline Surfactant Polymer (ASP) process, a very low concentration of the surfactant is used to achieve ultra low interfacial tension between the trapped oil and the injection fluid/formation water.

between the oil and water and make a strong, resilient film that resists breaking. This film prevents the dispersed droplets from coalescing into larger droplets and falling out of the mixture. Emulsion breaking is hence considered one of the most complex and situational aspects of oilfield chemistry.
