In a microwave beam directed at an angle into the sky, a small amount of the power will be randomly scattered as the beam passes through the troposphere. A sensitive receiver beyond the horizon with a high gain antenna focused on that area of the troposphere can pick up the signal.

A microwave oven (also commonly referred to as a microwave) is an electric oven that heats and cooks food by exposing it to electromagnetic radiation in the microwave frequency range. This induces polar molecules in the food to rotate and produce thermal energy in a process known as dielectric heating. Microwave ovens heat foods quickly and efficiently because excitation is fairly uniform in the ...

The final week of 2015 may bring temperatures to the North Pole as much as 75 degrees above normal (complete report on this is below). At the same time the completely engineered "cool-downs" continue in the US. How far does the scale need to tilt before people begin to open their eyes? The vast ...
